

Tropical Storm Harvey 2017 9/1/2017 – 1700 CDT Update

HIGHLIGHTS

Texas

Commented [RA1]: David Gray has requested that we only put new topics in the Highlights section. Repeat topics get moved further down on document.
Red- reported multiple times
Yellow- new info that hasn't been reported yet
Green- was reported at 1700 09/01/2017

Arkema Fire

As of September 1, 2017, one of the two trailers at the west of the initial one that burned early on August 31, 2017 started showing signs of a reaction by emitting white smoke that eventually turned to heavy black smoke. It is believed that the trailer next and to the east starting burning within 15-20 minutes. At around 1850 all indications were that the fire significantly subsided.

- Ground air monitoring to the east of the exclusion zone indicated constant readings of 0.3 PPM SO₂ at several time intervals between 1730 and 1850. The monitoring team checked the instrument calibration and the next reading at 1927 indicated non-detect. VOCs readings were between 0 and 0.2 ppm throughout the burning event.
- UC has determined that access to the facility is still unsafe.
- 1.5-mile radius evacuation still in effect.
- ASPECT recent flyover photos indicate that flood waters within the facility have receded significantly.
- At the request of the local jurisdiction and the Harris County Pollution Control, EPA started to collect flood water surface samples from the facility runoff at 4 locations plus background. A small residential area is located downstream from the facility in the path of the run-off.
- EPA will continue to maintain a rotational 24-hrs presence and air monitoring capabilities at the incident command operations center.

EPA, the Texas Commission of Environmental Quality (TCEQ), Crosby Fire Department, Harris County Fire Marshal Office, and Arkema have established a Unified Command at the Arkema response. EPA teams are reporting that temperatures in the trailers are rising slightly due to rising ambient temperatures. EPA has also identified a risk for a vessel of 38,000 pounds of Isobutylene that is close to the trailers of peroxide. The risk is radiant heat from burning peroxide could ignite the isobutylene.

Due to the unstable conditions of the trailers, access to the facility is still not possible and unsafe. The 1.5 mile radius evacuation is still in effect. ASPECT has performed overflights approximately twice per hour. The ASPECT continues to see detections of benzene peroxide at approximately 5 ppm which is well below health concerns. Monitoring for pollutants of concern is being conducted at locations accessible given current flooding and exclusion zone. Fixed air monitoring teams from EPA, Harris County Pollution Control and Liberty County are conducting monitoring around the exclusion zone. So far all readings are showing

[PAGE * MERGEFORMAT]

Salinity of concern: Unified Command at the Arkema site continue to coordinate with the EPA Region 6 Environmental Unit to determine locations on the site where flood water samples can be collected.

Beumont

On September 1, 2017, the TCEQ received the following status update from the City of Beaumont for their Water Treatment Facilities: The groundwater plant remains off-line due to flooding. The surface water treatment plant (SWP) is producing 6-8 million gallons per day (MGD) as of 9:00 am this morning. No water is being sent to distribution as this time, but plant operators are currently attempting to pressurize lines from the plant to pump stations and storage facilities. Attempts to pressurize distribution will be made September 1, 2017.

The raw water pumps are not operational, and estimated to remain out of service for 2-3 weeks. Crews are currently on-site laying additional pipe and installing additional pumps to bring raw water directly from the Neches River into the SWTP. The estimated demand will be 20 MGD. It is estimated that the full 20 MGD capacity will take another 24 hours. The elevated storage tanks and groundwater tanks are mostly full and are currently valved-off until the system is brought back online. The City of Beaumont will be on a boil water notice when it goes on-line.

The City has their Emergency Operations Center (EOC) fully functional and is coordinating efforts to make repairs and acquire chemicals and materials for both short-term and long-term. TCEQ spoke with the Managing Engineer for the City and he stated that their EOC is currently in control of the situation.

Coordination with Texas Department of Agriculture

On September 1, 2017, The region's Agriculture Policy Advisor did follow up on request from Texas Animal Health Commission (TAHC) and Texas Department of Agriculture (TDA) for salinity probes to determine if surface water can be used for livestock uses. It was determined that region has all salinity probes already deployed in Bird Creek. Through communications to various external partners, the Agriculture Advisor was able to arrange conductivity meters Texas AgriLife has to contacts working with TAHC and TDA. These meters were previously purchased with CWA Section 319h funds the Region manages and awards to Texas. In addition, EPA on-scene coordination staff made contact with USDA-Natural Resources Conservation Service staff to facilitate monitoring equipment be loaned to TAHC and TDA. The need is that ranchers need to know if water resources for their livestock is safe to use. Salinity levels above 5,000 part per million become are no longer satisfactory for cattle use.

Louisiana

The President has issued an emergency declaration for the five Louisiana Parishes requested by the Louisiana Governor for the following Parishes: Beauregard, Calcasieu, Cameron, Jefferson Davis and Vermillion.

Resources

Commented [RA2]: Mikeal Adams (log) and Resources will be sending resource numbers each evening prior to him leaving. They do not have the HQ numbers so we will need to call the HQ EOC to get personnel numbers.

[PAGE * MERGEFORMAT]

Activities

Commented [RA3]: Feedback is to start providing accomplishments. How much area have they covered (completed grids)? How many orphaned containers have the recovered? How many haz evaluations?

Corpus Christi

On September 1, 2017, EPA deployed two container recovery teams will be collecting orphaned containers where hazard evaluations have been completed. Six oil discharge assessment teams consisting of US Coast Guard and Texas General Land Office are conducting reconnaissance in the area. Four TCEQ water infrastructure teams are conducting drinking water and waste water assessments. Two teams are conducting air reconnaissance via helicopters.

Houston

Eight hazard evaluation teams consisting of U.S. Coast Guard (USCG) and TCEQ and two oil discharge assessment teams consisting of USCG and TCEQ are working in the Houston area. USCG is also conducting orphaned container recovery in the area.

EPA is deploying four teams of On Scene Coordinators and contractors to Beaumont-Port Arthur to coordinate with TCEQ, TGLO, and US Coast Guard in responding to releases and spills at facilities. These teams will stage in Houston until weather allows them to enter the Beaumont-Port Arthur area.

On Saturday, September 2, 2017, EPA will send four additional Drinking Water/Wastewater Assessment Teams to Corpus Christi, and four Drinking Water/Wastewater Assessment Teams to Houston.

On September 1, 2017, the Department of Transportation (DOT), Pipeline and Hazardous Materials Safety Administration (PHMSA) has issued a waiver of hazardous materials regulations to persons conducting operations under the direction of EPA Region 6 within the Hurricane and Tropical Storm disaster and emergency areas of Texas and Louisiana. The waiver is granted to support EPA in taking appropriate actions to prepare for, respond to, and recover from and protection of public health and welfare, or the environment caused by actual or potential oil and hazardous materials incidents resulting from Hurricane

Spill/Release Response

Hotline Calls as of September 1, 2017	
Number of Harvey Related Calls Received During Reporting Period 0100 and 1300 hrs	14
Total Number of Harvey Related Calls to Date	99

Commented [RA5]: Data in table comes from web eoc hotline calls (spill reports) Number of related calls received during reporting period is count of Harvey related calls btw 0100 and 1300 hrs and 1300 and 0100. Total number of Harvey related calls to date is total from 8/24/2017. Language below should be maintained for now. Add information if actions are taken on calls.

EPA is assessing each call to determine appropriate response and forwarding reports to field personnel to conduct further assessments and response as needed.

Drinking Water / Wastewater Assessments

EPA continues to support TCEQ in contacting drinking water and waste water systems. EPA deployed 10 personnel to assist TCEQ's Drinking Water and Waste Water Phone Bank located in Austin.

Drinking Water - Total # of Systems: 4512

STATUS	NUMBER OF SYSTEMS
Contact Pending	196
Bacteria Sample Results Pending	5
Out of Contact	21
On generator – lost pressure	5
No problems	369
On generator – never lost pressure	17
No Status	3812
Lost pressure & or Treatment	37
Lifted boil water notice due to negative bacteria samples. Normal Ops resumed	10
System Destroyed	1
Not Operating	39

Commented [RA6]: These DW/WW tables are generated by data pull from Response Manager. It is data from TCEQ and the Call bank in Austin, TX. Senior Management has requested that the table become easier to understand so the plan (hopefully 9/2/2017) is to replace these tables with a map that identifies system status with colored points. START is working with the DSC and water team to create this map. The water team (Kim Ngo) is drafting narrative language to explain what the map is showing. Senior Management has stated that if tables extend to following page that a title and column names be added to following page.

Waste Water - Total # of Systems: 2442

STATUS	NUMBER OF SYSTEMS
Contact Pending – Phone eval only	52
Out of Contact – phone evaluation only	3
No Problems	373
Unknown	1977
Waste Water Treat. Plant and/or Collection on Generator or bypass pumps for Lift Station	21
Waste Water Treat. Plant and/or Collection non operational no Sanitary Sewer Overflow	1
WWTP and/or Collection Partially Operational Sanitary Sewer Overflow	15

[PAGE * MERGEFORMAT]

EPA Laboratory/ Analytical Services

The Houston laboratory will be closed until Tuesday September 5, 2017. The laboratory and office building are not damaged. EPA has back up capabilities for laboratory services should the Houston facility remain closed.

EPA's organic chemical mobile laboratory arrived in Houston, Texas on August 31, 2017. The mobile laboratory can be utilized to process environmental samples.

Refineries/Fuel Waivers

TEXAS: EPA approved the State of Texas' request to extend the Texas fuel waiver to allow use of non-road diesel fuel in on-road applications. This non-road fuel has different tax treatment, and to differentiate it, is colored with red dye. The Internal Revenue Service (IRS) issued a waiver of the dyed diesel fuel penalty through September 15, 2017. The IRS will not impose a penalty when dyed diesel fuel is sold for use or used on the highway.

LOUISIANA: A waiver that would allow use of 9.0lb RVP was approved on 28 August. LDEQ thanked EPA, Ro and Department of Energy for the quick turnaround and assistance this week. On September 1, 2017 the Governor of Louisiana requested a No Action Assurance from the EPA Region 6 Acting Regional Administrator. According to Louisiana this in order to facilitate the delivery of fuels to areas of Louisiana and Texas impacted by the hurricane, the Louisiana Department of Environmental Quality (LDEQ), on behalf of Governor John Bel Edwards, respectfully requests that EPA provide a "no action assurance" to allow for the use of tank trucks, railcars, and marine tank vessels that may not have the requisite vapor tightness documentation necessary to load gasoline and other petroleum products at Louisiana facilities.

OKLAHOMA: A statewide low Reid Vapor Pressure (RVP) fuel waiver request was submitted on August 28, 2017, and amended their request on August 30, expanding 11.5 RVP waiver nationwide.

ARKANSAS: The State is drafting a waiver request to temporarily waive the requirement for low 9.0lb RVP fuel.

On August 30th, EPA issue a waiver for the temporary use of 11.5 PSI RVP gasoline in the following states: Alabama, Georgia, Kentucky, Maryland, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, Texas, Louisiana, Florida and the District of Columbia. For Texas and Louisiana, it expands the waiver coverage area from the earlier waiver granted.

6. EPA issued a waiver for 38 states and the District of Columbia of all low volatility gasoline requirements in any State Implementation Plan that applies in the

designated states. This waiver now includes all five Region 6 states: Arkansas, Louisiana, New Mexico, Oklahoma and Texas. The waiver for El Paso, Texas goes until September 16, 2017 due to their State Implementation Plan requirements.
